Chart Analysis

China Sky has a possible bullish candlestick reversal pattern on the cards. We need a white candle for confirmation. Price is now supported by the 50-day moving average as well as the $1.26 horizontal support line. Though MACD Histogram is showing a possible trend reversal with the turning of the bars from red to green, RSI is still showing bearish signs with lower highs attained for higher highs in price.

XPertTrader Corner

This week, we will highlight 1 rule from our Moving Average Indicator. Our objective is to screen out stocks that are trading between the 20-day moving average and the 50-day moving average. If a stock breaks its 20-day moving average, it can possibly rebound off 50-day moving average for support. Otherwise there might be a chance that the price will close up the 20-day moving average for a trading opportunity.

Indicators >>> Moving Average >>> Price Close Between 2 MAs

Parameter settings are as follows:

TA Bites

Moving averages are popular among technical analysis practitioners in that they give clear entry and exit signals. Such signals take the form of crossover between two moving averages, crossover between price and moving average and moving average acting as support/resistance level to price movement.

One strategy based on moving average is to identify stocks which are moving between 2 moving averages say a 20-day moving average and a 50-day moving average. In a bullish trend (where the short-term moving average is above the long-term moving average), an entry signal, confirmed with a candlestick bullish reversal pattern may be generated when the price is rebounding from the long-term moving average and heading towards the short-term moving average. In a bearish trend, the reverse applies.

Events

“Cracking the Stock Market Code”

This one full day course is our 5th and last year-2006 intake of our technical analysis course that will arm you with sound technical analysis achieved through lots of chart practices and with a 4-step trading strategy checklist.

Learn Vol Analysis, Trends, Candlesticks, RSI and MACD in this practical course. Lunch buffet is included.

Course will be held on 16 Dec 2006
